Problem Statement / Concept Title	**EcoConnect: Smart Waste Reporting & Community Cleanliness**
Theme	Environment & Civic Tech
Team Name (Registered on portal)	[Enter registered team name]
Team ID (Registered on portal)	HSC|TN|03164
State/UT	Tamil Nadu

[Team Name]

Problem – Proposed Solution

Core problem

Reporting gap

No simple way to send a photo + location

Coordination gap

Volunteers don't know where help is needed

Tracking gap

Residents can't see if a spot was cleaned

Pilot first: one campus or ward to validate the need

Proposed solution: Report → Assign → Resolve → Verify

1 Report

Photo, waste type, map pin

2 Assign

Dashboard groups by area; routes to coordinator

3 Resolve

Team updates status + after-photo

How it addresses the problem

- One consistent channel to report waste hotspots
- Status tracking: Reported → In progress → Resolved
- Volunteers join nearby scheduled cleanup drives

Innovation: a visible, measurable, community-led cleanup loop with before/after verification, not just a complaint form.

[Team Name]

Technical Approach

Methodology & process

A

Citizen reports

Photo + location + note

B

Review dashboard

Check duplicates, urgency

C

Volunteer matching

Nearby volunteers join drive

D

Status tracking

Reported → In progress → Resolved

E

Verification

After-photo + coordinator OK

Technologies to be used

Frontend	HTML, CSS, JavaScript
Backend / DB	Firebase or Supabase
Maps	OpenStreetMap component

Links & AI usage

GitHub/GitLab: [add public repo link]

Demo video: [add video link]

AI tools: [state tools used & what they did; e.g. drafting/code help. Future: image-based waste category suggestion]

[Team Name]

Impact Potential

Environmental

More visible waste hotspots and better follow-up on cleanups

Community

Clear roles for residents, youth volunteers and coordinators

Governance

Simple record of reports, response time and resolved cases

Stakeholders

- Residents and pedestrians
- Sanitation workers and local bodies
- Students and community volunteers

Pilot success measures

- Number of verified reports
- % of reports resolved
- Average time from report to action
- Volunteer participation; repeat dumping

[Team Name]

Feasibility and Risk Analysis

Feasibility

- Beginner-friendly stack (free tiers)
- Pilot in one campus/ward
- Working demo with sample reports first
- Phased plan: Discover → Build → Test

Challenges & strategies

Risk	Mitigation
Fake / duplicate reports	Coordinator review; duplicate check by location
Privacy & safety	Exact location only to authorised coordinators; no personal details public
Low volunteer turnout	Scheduled drives, youth clubs, partner coordinator
No follow-up by local body	After-photo verification; response-time record
Language barrier	Add Tamil and regional-language support

[Team Name]

Team

Team Composition – Sri Sairam Engineering College, Kanchipuram, Tamil Nadu

Member 1 – Role

[Name]

UI and report form

Member 2 – Role

[Name]

Database and status dashboard

Member 3 – Role

[Name]

Community research, testing, pitch

Challenges

[Add real challenges, e.g. learning the stack, time, testing with real users]

Our journey

[Add anything you'd like to share about your journey]
